Đoàn Thanh Minh

.Net FullStack Developer

Experienced .NET Full Stack Developer with over 6 years in developing web, desktop, and mobile applications. Proficient in C#, ASP.NET,C++, Web API, SQL Server, and modern front-end technologies (ReactJS, HTML5, CSS3, JavaScript). Seeking a challenging role in a dynamic team where I can contribute to full lifecycle software development and leverage cross-platform experience.

AI-Applied Engineering & Automation (2024 – Present)

- Applied AI tools (ChatGPT, GitHub Copilot, AI code assistants) within SDLC to accelerate feature delivery and reduce defect rate.
- Designed AI-assisted rule validation systems using embedded scripting engines (ChaiScript) for dynamic execution of business logic.
- Built intelligent data validation and automation modules to improve BIM parametric modeling workflows.
- Integrated AI-based content generation and suggestion mechanisms into internal tools to support business rule analysis.
- Leveraged AI tools for:
    - Automated unit test generation
    - Code refactoring and optimization
    - Documentation generation
    - Log analysis and debugging support
- Evaluated when AI adds business value vs when traditional engineering is more efficient.
- Applied prompt engineering techniques to optimize AI output quality in development pipelines.

Skills

Work experience

German Software Intelligence | 7/2024 - Present

.Net FullStack Developer

Developed WPF desktop applications integrated with **Allplan platform**, focusing on BIM features and automation tools using **C# and .NET**.

Created **RESTful Web APIs** with **ASP.NET** and managed data operations via **SQL Server**.

Implemented interactive and user-friendly **desktop UI** using **WPF (MVVM pattern)**, including custom controls, 3D model viewers, and

University of Transport _ Ho Chi Minh City

Major: Information TechnologyJuly 2014 - March 2019

real-time data binding.
Embedded **ChaiScript engine** to dynamically execute business logic and rule validation within C++/C# hybrid architecture.
Worked closely with **CNOI** (custom object integration) to enable smart object manipulation and parametric behaviors inside Allplan.

- Contributed to internal tooling with **Python and C++**, enabling automation, data transformation, and plugin integration.

Saigoncenterreal | 7/2023 - 7/2024

.Net FullStack Developer

Developed and led the delivery of a real estate management platform, including web applications, RESTful APIs, and background services using **ASP.NET MVC/Core 3.1** and **SQL Server**.
Built **cross-platform mobile applications** for iOS and Android using **Flutter**, ensuring seamless integration with backend services.
Managed a cross-functional team, including Flutter mobile developers and ReactJS frontend engineers, to deliver a cohesive user experience.
Led **UI/UX design and implementation** using **HTML, CSS, JavaScript, and ReactJS**, focusing on responsive and user-friendly interfaces.
Integrated **Azure DevOps CI/CD pipelines** to automate build, testing, and deployment workflows for both web and mobile applications.

- Deployed backend services and databases to **Azure App Services** and **Azure SQL Database**, ensuring high availability and scalability.

StepMedia | 7/2021 - 7/2023

.Net FullStack Developer

Participated in the development of a commercial auditing web platform for international clients, including Deloitte.
Designed and developed full-stack applications using ASP.NET Core 3.1 (upgraded to .NET 8), ReactJS, and SQL Server. Built core features such as report generation, file import (Excel/CSV), API integration for third-party systems, and real-time data synchronization.
Implemented unit tests to ensure code quality and applied performance optimization techniques to handle large audit datasets.
Key auditing features included:

- Audit checklist and control point management
- Evidence collection and file uploads
- Risk scoring and audit result analysis
- Dashboard with visual charts and KPIs
- Email notifications and task tracking
- Multi-level role-based access and workflow approval
- Deployed CI/CD pipelines and contributed to system stability and scalability for enterprise-level users.

SouthTelecom Company | 11/2018 - 7/2021

.Net FullStack Developer

Developed a messaging web platform using ASP.NET MVC 4.5 with Bootstrap for the user interface, and later migrated the system to ASP.NET Core 2.0 with Angular 10 to improve scalability and maintainability.

Designed and implemented key features including:

- SMS message management (create, send, receive, delete)
- Message scheduling with support for batch and recurring sends
- Automated SMS triggers based on time or business rules
- Message templates with placeholders for dynamic content
- Real-time delivery status tracking (sent, failed, pending)
- Advanced reporting and analytics with filters (date range, campaign, status)
- User and permission management (admin, operator roles)
- Integration with multiple SMS gateway providers via RESTful APIs
- Support for multiple message types (OTP, marketing, notification)
- Import/export of recipient data from Excel/CSV
- Bulk processing of SMS jobs using Dockerized Python services for high-speed file I/O
- Scheduled email delivery of SMS reports (daily, weekly, monthly)
- Integrated SQL Server as the main data store and used Docker-based Python microservices to efficiently process large-scale data and files. Deployed CI/CD pipelines and published the system on a Windows Server environment for production use.
