Đoàn Thanh Minh

Python Developer

Experienced Python Developer with over 6 years of experience building web, desktop, and mobile applications. Proficient in Python, FastAPI, Flask, Django, Web API development, and microservices architecture. Strong hands-on experience with SQL Server, PostgreSQL, MySQL, MongoDB, and Redis. Skilled in modern front-end technologies including ReactJS, AngularJS, HTML5, CSS3, and JavaScript.

Experienced in working with cloud platforms such as AWS and Azure, as well as containerization technologies like Docker and Kubernetes. Hands-on experience implementing LLM-powered features using OpenAI APIs.

Seeking a challenging role in a dynamic team where I can contribute across the full software development lifecycle and leverage my cross-platform development expertise to deliver scalable and high-performance solutions.

AI-Applied Engineering & Automation (2024 – Present)

- Applied AI tools (ChatGPT, GitHub Copilot, AI code assistants) within SDLC to accelerate feature delivery and reduce defect rate.
- Designed AI-assisted rule validation systems using embedded scripting engines (ChaiScript) for dynamic execution of business logic.
- Built intelligent data validation and automation modules to improve BIM parametric modeling workflows.
- Integrated AI-based content generation and suggestion mechanisms into internal tools to support business rule analysis.
- Leveraged AI tools for:
    - Automated unit test generation
    - Code refactoring and optimization
    - Documentation generation
    - Log analysis and debugging support
- Evaluated when AI adds business value vs when traditional engineering is more efficient.
- Applied prompt engineering techniques to optimize AI output quality in development pipelines.

Major: Information TechnologyJuly 2014 - March 2019

Python Backend Developer | FastAPI / Django

Python Developer | BIM Automation & Backend (FastAPI / Django)

- Designed and developed **backend services using FastAPI and Django**, providing RESTful APIs for BIM data processing, validation, and integration with external systems.
- Built **automation services** in Python to handle **data transformation, batch processing, and synchronization** between BIM models and databases.
- Developed **API-driven tools** to support automated drawing generation, object parameter management, and rule-based model validation workflows.
- Integrated **Python backend services with C++ modules** for performance-critical computations, exposing core logic through secure and scalable APIs.
- Embedded **rule engines (ChaiScript / Python-based rules)** to enable dynamic business logic execution and flexible configuration.
- Collaborated closely with **CNOI (Custom Object Integration)** to deliver parametric smart object services and extend Allplan infrastructure modeling capabilities.
- Applied backend best practices including **clean architecture, dependency injection, exception handling, unit testing**, and **version control with Git**.

Saigoncenterreal | 7/2023 - 7/2024

Python Backend Developer | FastAPI / Django

Developed **automation services and background workers in Python** for data transformation, scheduled jobs, and integration with external APIs (e.g., payment gateways, CRM systems).
Implemented **asynchronous background processing** using FastAPI, Celery, and task queues to handle long-running jobs and high-volume backend workloads.
Built **log analysis, health-check monitoring, and auto-scaling decision tools** using Python to proactively manage backend performance and reliability.
Designed and developed **web applications and RESTful APIs** using **FastAPI and Django**, serving core business logic and data access layers.
Built and maintained **database schemas and ORM models** using Django ORM / SQLAlchemy with PostgreSQL or SQL Server.
Led the delivery of a **real estate management platform**, coordinating backend services, APIs, and background processing layers in a Python-based architecture.
Developed and integrated **cross-platform mobile backend APIs** to support iOS and Android applications (Flutter clients).
Collaborated with frontend teams (ReactJS) to deliver responsive and user-friendly web interfaces backed by Python APIs.
Implemented **CI/CD pipelines** using GitHub Actions / Azure DevOps to automate testing, container builds, and deployments.

Deployed backend services using **Docker and cloud platforms (Azure App Services / AWS / GCP)**, ensuring scalability, fault tolerance, and high availability.

- Applied backend best practices including **clean architecture, dependency injection, API security, logging, monitoring**, and **unit/integration testing**.

StepMedia | 11/2021 - 7/2023

Python Backend Developer | FastAPI / Django (Enterprise Auditing Systems)

Participated in the development of an **enterprise-grade commercial auditing web platform** for international clients, including **Deloitte**.
Designed and developed **backend services and RESTful APIs** using **FastAPI and Django**, supporting large-scale audit workflows and data-intensive operations.
Built core backend features including **audit report generation**, **file import/export (Excel/CSV)**, **third-party API integrations**, and **real-time data synchronization**.
Implemented **asynchronous processing** and optimized database queries to efficiently handle **large audit datasets**.
Developed and maintained **automated test suites** (unit and integration tests) to ensure system reliability and code quality.
Key auditing features delivered:

- Audit checklist and control point management
- Evidence collection and secure file uploads
- Risk scoring and audit result analysis
- KPI dashboards and analytical data APIs
- Email notifications and task tracking workflows
- Multi-level **role-based access control (RBAC)** and approval workflows

Collaborated with frontend teams (ReactJS dashboards) by delivering **high-performance APIs** optimized for data visualization and reporting.

- Contributed to **CI/CD pipelines**, system monitoring, and performance tuning to ensure **scalability, stability, and enterprise-grade reliability**.

SouthTelecom Company | 11/2019 - 11/2021

Python Backend Developer | High-Volume Messaging Platform (FastAPI / Django)

Designed and developed a **high-volume messaging web platform** using **FastAPI and Django**, focused on scalability, reliability, and maintainability.
Built **RESTful backend services** to support core messaging features:

- SMS management: create, send, receive, delete
- Message scheduling with batch and recurring execution
- Automated SMS triggers based on business rules and time-based schedules
- Message templates with dynamic placeholders

- Real-time message status tracking (sent, failed, pending)
- Advanced reporting and analytics (campaign, date range, delivery status)

Implemented **role-based access control (RBAC)** for admin and operator roles.
Integrated with **multiple SMS gateway providers** via RESTful APIs, supporting OTP, marketing, and transactional messages.
Developed **file import/export services** for recipient lists using Excel and CSV formats.
Built **Python-based microservices (Dockerized)** to handle:

- High-performance file I/O
- Batch SMS job processing
- Large-scale data transformation and validation

Implemented **asynchronous background processing** using Celery / task queues for parallel SMS delivery and long-running jobs.
Developed **automated reporting services** to generate and email daily, weekly, and monthly reports.
Used **SQL Server** as the primary datastore, optimizing queries and applying Python-based parallel processing for large datasets.
Designed and maintained **CI/CD pipelines**, ensuring smooth deployments and high availability in production environments.

- Deployed and operated backend services on **Windows Server and containerized environments**, ensuring system stability and scalability.

Sorimachi Company | 10/2018 - 10/2019

Python Backend Developer | Accounting & Finance Systems (Django / FastAPI)

Developed and maintained **core backend services** for a **Japanese accounting web system** using **Django and FastAPI**, ensuring compliance with Japanese accounting standards and tax regulations.
Implemented key accounting and finance modules, including:

- Tax calculation and management (consumption tax, withholding tax, etc.)
- Ledger and journal entry management with **double-entry bookkeeping**
- General accounting workflows and automated closing processes
- Balance carry-forward and period-end processing
- Chart of accounts management and account reconciliation
- Customizable financial reports (P&L, Balance Sheet, Trial Balance)
- Multi-currency handling and localization for Japanese standards
- Audit trail, version history tracking, and data change logs
- User access control by department and permission level

Built **background processing services** in Python for batch import/export, report generation, and scheduled accounting jobs.
Implemented **file processing and data transformation pipelines** (CSV, Excel, XML) for integration with external financial systems.
Designed **data synchronization services** to exchange accounting data with third-party platforms.

Collaborated closely with **QA engineers and business analysts** to validate business rules, tax logic, and regulatory compliance.

- Ensured **data accuracy, performance, and maintainability** for financial systems handling critical enterprise data.
