Đoàn Thanh Minh

.Net FullStack Developer

Experienced .NET Full Stack Developer with over 6 years in developing web, desktop, and mobile applications. Proficient in C#, ASP.NET,C++, Web API, SQL Server, and modern front-end technologies (ReactJS, HTML5, CSS3, JavaScript). Seeking a challenging role in a dynamic team where I can contribute to full lifecycle software development and leverage cross-platform experience.

AI-Applied Engineering & Automation (2024 – Present)

- Applied AI tools (ChatGPT, GitHub Copilot, AI code assistants) within SDLC to accelerate feature delivery and reduce defect rate.
- Designed AI-assisted rule validation systems using embedded scripting engines (ChaiScript) for dynamic execution of business logic.
- Built intelligent data validation and automation modules to improve BIM parametric modeling workflows.
- Integrated AI-based content generation and suggestion mechanisms into internal tools to support business rule analysis.
- Leveraged AI tools for:
    - Automated unit test generation
    - Code refactoring and optimization
    - Documentation generation
    - Log analysis and debugging support
- Evaluated when AI adds business value vs when traditional engineering is more efficient.
- Applied prompt engineering techniques to optimize AI output quality in development pipelines.

Work experience

German Software Intelligence | 2/2025 - Present

.Net FullStack Developer

Developed WPF desktop applications integrated with Allplan platform, focusing on BIM features and automation tools using C# and .NET (Feb 2025 – Present).

Designed and implemented RESTful Web APIs using ASP.NET Core and managed data operations with SQL Server.

Built responsive web-based tools and dashboards using Angular v18 for interacting with backend APIs and visualizing BIM-related data.

Skills

English

Computer

Honors & Awards

University of Transport _ Ho Chi Minh City

Major: Information TechnologyJuly 2014 - March 2019

Implemented interactive and user-friendly desktop UI using WPF (MVVM pattern), including custom controls, 3D model viewers, and real-time data binding.
Integrated ChaiScript engine to dynamically execute business logic and validation rules within a C++/C# hybrid architecture.
Worked with CNOI (custom object integration) to enable smart object manipulation and parametric behaviors within the Allplan ecosystem.
Contributed to internal tools using Python and C++, supporting automation, data transformation, and plugin integration.

Saigoncenterreal | 7/2023 - 2/2025

.Net FullStack Developer

Developed and led the delivery of a real estate management platform, Led the end-to-end development and delivery of a real estate management platform, including web applications, RESTful APIs, and background services using ASP.NET Core (migrated from .NET Core 3.1 to .NET 8) and SQL Server.
Developed cross-platform mobile applications for iOS and Android using Flutter, ensuring seamless integration with backend APIs and real-time data synchronization.
Managed and mentored a cross-functional team of Flutter mobile developers and frontend engineers (ReactJS and Angular v16), ensuring smooth collaboration and high-quality deliverables.
Designed and implemented responsive, user-friendly UI using HTML, CSS, JavaScript, and modern frontend frameworks (ReactJS, Angular v14+), focusing on performance and usability.
Built and maintained CI/CD pipelines using Azure DevOps to automate build, testing, and deployment workflows.

- Deployed and managed backend services on Azure App Services and Azure SQL Database, ensuring high availability, scalability, and system reliability.

StepMedia | 7/2021 - 7/2023

.Net FullStack Developer

Participated in the development of a commercial auditing web platform for international clients, including Deloitte (Jul 2021 – 2023).
Designed and developed full-stack applications using ASP.NET Core 3.1 (later upgraded to .NET 8), ReactJS, Angular 14, and SQL Server.
Built and maintained core features such as report generation, file import (Excel/CSV), third-party API integrations, and real-time data synchronization.
Implemented unit testing to ensure code quality and applied performance optimization techniques to efficiently handle large-scale audit datasets.
Developed key auditing modules, including audit checklist and control point management, evidence collection and file uploads, risk scoring and audit result analysis, and KPI dashboards with data visualization.

Implemented email notification systems, task tracking workflows, and multi-level role-based access control with approval processes.

- Contributed to CI/CD pipeline implementation using Azure DevOps and improved system stability and scalability for enterprise-level users.

SouthTelecom Company | 11/2018 - 7/2021

.Net FullStack Developer

Developed a messaging web platform using ASP.NET MVC 4.5 with Bootstrap for the user interface, and later migrated the system to ASP.NET Core 2.0 with Angular 10 to improve scalability and maintainability.

Designed and implemented key features including:

- SMS message management (create, send, receive, delete)
- Message scheduling with support for batch and recurring sends
- Automated SMS triggers based on time or business rules
- Message templates with placeholders for dynamic content
- Real-time delivery status tracking (sent, failed, pending)
- Advanced reporting and analytics with filters (date range, campaign, status)
- User and permission management (admin, operator roles)
- Integration with multiple SMS gateway providers via RESTful APIs
- Support for multiple message types (OTP, marketing, notification)
- Import/export of recipient data from Excel/CSV
- Bulk processing of SMS jobs using Dockerized Python services for high-speed file I/O
- Scheduled email delivery of SMS reports (daily, weekly, monthly)
- Integrated SQL Server as the main data store and used Docker-based Python microservices to efficiently process large-scale data and files. Deployed CI/CD pipelines and published the system on a Windows Server environment for production use.
